

Adatbázisrendszerek II.

10. gyakorlat jegyzőkönyv

Garamszegi Márton

AJYKQ3

Kurzor készítése:

```
1 create or replace procedure tlp as
2
3     cursor cur is select * from kategoria;
4     cv cur%rowtype;
5
6 begin
7     open cur;
8     loop
9         fetch cur into cv;
10        exit when cur%notfound;
11        dbms_output.put_line('Név: ' || cv.nev);
12        dbms_output.put_line('Feldolgozva: ' || cur%rowcount);
13    end loop;
14    close cur;
15 end;
```

Procedura:

```
create or replace procedure tlpfor as
    cursor cur is select * from kategoria;
begin
    for cv in cur
    loop
        dbms_output.put_line('Név: ' || cv.nev);
        dbms_output.put_line('Feldolgozva: ' || cur%rowcount);
    end loop;
end;
```

Táblák létrehozása és feltöltése:

```
create table piros_auto(rsz varchar(20),
tipus varchar(20), szin varchar(20), kor
number, ar number);

insert into piros_auto values('ABC500',
'Opel Corsa', 'kék', 8, 720000);

insert into piros_auto values('MCC325',
'Opel Insignia', 'piros', 10, 2680000);

insert into piros_auto values('ASD124', 'Lamborghini Gallardo','kek', 5, 150000);
insert into piros_auto values('DFG411', 'Renault Twingo', 'piros', 12, 630000);
insert into piros_auto values('WER432', 'BMW M3', 'fehér', 5,4500000);
insert into piros_auto values('DFG862', 'Porsche 911', 'szürke', 14, 45000);

create table MasikPiros_Auto (rsz varchar2 (20), tipus varchar2 (20), szin varchar2 (20), kor number
(3,0), ar number (10,0));
```

Árnövelések:

```
CREATE or replace procedure aut_arnov2(szinbe in char, ert in int) IS
cursor cur_a IS select * FROM autok WHERE szin=szinbe
FOR UPDATE OF ar;
db cur_a%rowtype;
```

```
BEGIN
open cur_a;
for db in cur_a
loop
fetch cur_a into db;
exit when cur_a%notfound;
update autok set ar=db.ar*(1+ert/100) where current of cur_a;
end loop;
close cur_a;
END;
```

```
create or replace procedure aut_arnov3(szinbe in char, ert in int) is
cursor cur_b is select * from autok where szin=szinbe
for update of ar;
b cur_b%rowtype;
darab number := 0;
begin
if cur_b%isopen then
close cur_b;
end if;
open cur_b;
loop
fetch cur_b into b;
exit when cur_b%notfound;
update autok set ar=b.ar*(1+ert/100) where current of cur_b;
darab:=darab+1;
end loop;
close cur_b;
dbms_output.put_line('Darabok: ' || darab);
end;
```

Ellenőrzés:

```
begin
  open cur_a;
loop
  fetch cur_a into a;
  exit when cur_a%notfound;
  update autok set ar=a.ar*(1+ert/100) where current of cur_a;
end loop;
close cur_a;
end;

begin
  aut_arnov('piros', 10);
end;
```
